

Created and Launched an Instance

```
sudo -i (switch Normal to root user)
```

Created folder practice in /root

```
cd /root  
mkdir practice  
cd practice  
pwd : /root/practice
```

Java Installation

```
yum install java -y  
java --version
```

The screenshot shows a terminal window titled 'CloudShell' on an AWS interface. The user has run several commands to install Java and check its version:

```
[root@ip-172-31-15-37 ~]# pwd  
/root  
[root@ip-172-31-15-37 ~]# mkdir practice  
[root@ip-172-31-15-37 ~]# cd practice  
[root@ip-172-31-15-37 practice]# yum install java -y

```

The CloudShell interface includes standard navigation buttons (Back, Forward, Home) and a search bar at the top. At the bottom, there are links for CloudShell, Feedback, Language, Privacy, Terms, and Cookie preferences.

Maven Build Process

Generate archetype

```
cd /root
```

```
mvn archetype:generate
```

```
choose artifactId: 1986
```

```
choose version: 8
```

```
define groupId: com.global
```

```
define artifactId: maven-project
```

```
define 1.0-SNAPSHOT: 1.0-SNAPSHOT
```

```
define package: com.global.app
```

```
confirm properties configuration: Y
```

The screenshot shows a terminal window within the AWS CloudShell interface. The user has run the command `mvn archetype:generate`. The output shows the configuration parameters being set: groupId (com.global), artifactId (maven-project), version (1.0-SNAPSHOT), and package (com.global.app). It also includes a warning about not overriding the sample icon file. The process concludes with a "BUILD SUCCESS" message.

```

Validate

```
cd /root/maven-project
```

```
mvn validate
```

The screenshot shows a terminal window within the AWS CloudShell interface. The user has run the command `mvn validate`. The output shows the Maven plugin scanning for projects and building the sample Apache Brooklyn project. It includes details about the build number and SCM branch, and concludes with a "BUILD SUCCESS" message.

Created maven-project repository in GitHub

Before pushing the code from local repo

The screenshot shows the GitHub interface for creating a new repository. At the top, it says "skzakeer27 / maven-project". Below that, there are sections for "Set up GitHub Copilot" and "Add collaborators to this repository". A "Quick setup" section provides instructions and links for desktop setup or cloning via HTTPS or SSH. It also encourages adding a README, LICENSE, and .gitignore. A command-line setup section shows the terminal commands: echo "# maven-project" >> README.md, git init, git add README.md.

After Pushing the code to maven-project repository in GitHub

The screenshot shows the GitHub repository page for "maven-project". It displays a commit history with one commit from "root" at 7 minutes ago. The commit message is "maven-project committed". The commit hash is fa33024. The repository structure shows files like README.md, pom.xml, brooklyn.debug.log, brooklyn.info.log, target, and src. On the right side, there are sections for "About" (maven-project, Readme, Activity, 0 stars, 1 watching, 0 forks), "Releases" (No releases published, Create a new release), and "Packages" (No packages published).
